

# **Horticultural Cornmeal**

## **Natural Fungus Control, Organic Soil Fortifier and Natural Algae Control**

What is Bluebonnet Farms™ Horticultural Cornmeal?

### **Fungus Control**

An amazing product specially prepared with a precise horticultural grind best for soil application. Horticultural Cornmeal is an organic product which naturally helps control root and soil borne fungal problems. This natural plant disease fighter has been shown to help control unfriendly soil pathogens such as Rhizoctonia and Sclerotinia minor fungi, which can cause plant diseases on pods, pegs, limbs, leaves and roots. Bluebonnet Farms Horticultural Cornmeal is a natural food source for Trichoderma fungi which populate quickly when Horticultural Cornmeal is present. This Trichoderma species of fungi is antagonistic to the Rhizoctonia and Sclerotinia minor fungal species thus inhibiting these pathogens from populating the soil. This incredible product synergistically feeds some plant friendly fungi which in turn help control the unfriendly fungi. This product also is a natural soil building organic plant food of a very mild nature. The more product you use, in the same areas overtime, the higher the organic matter level will build up in your soil.

### **Directions For Soil Application**

May be used on food crops or ornamental plants. Apply 2 lbs. per 100 Sq. Ft. or 20 lbs. per 1,000 Sq. Ft.. Apply directly to soil and lightly till or water in. May be applied several times throughout the Spring, Summer, and Fall. This natural product is difficult to overuse since it breaks down quite rapidly further fortifying the soil with nutrient rich organic matter while acting as a natural soil fungus fighter.

### **Algae Control In Ponds Or Lakes**

Bluebonnet Farms Horticultural Cornmeal acts as a natural algae control product. It may be used in small back yard ponds, lakes, and farm ponds. Spread evenly over water surface at a rate of 1 lb. per 200 sq. ft. or 5 lbs. per 1,000 sq. ft. of water surface area. For larger lakes use 200 lbs. per acre of surface water. Use with caution: A rapid algae kill can deplete oxygen levels in water possibly resulting in the death of fish.

\*After Application - water in deeply and allow soil to dry.

Note: This non-toxic product is made from corn which may be touched and handled as you would any dry corn product. Handle with care if you are allergic to corn.

**-INGREDIENTS-**  
Horticultural Cornmeal.
